

SHAHRUKH KHAN

Lead Data Engineer

✉ shairazkhan92@gmail.com ☎ +91-7017168664 📍 Kichha, India

Professional Summary

- Adaptable professional with Overall 8 years of experience in Data Engineering, Big Data and Data Warehousing technologies, including 2+ years in a Lead Data Engineer role.
- Extensive hands-on experience with Big Data solutions, including **Hadoop, HDFS, MapReduce (MR), Spark, Hive, HBase, Sqoop, Python and PySpark**.
- Proficient in working with **Spark APIs**, including **Spark RDD, Dataframe and Dataset APIs**.
- Worked with various file formats such as **JSON, PARQUET, AVRO, ORC and text files**.
- Expertise in Extraction, Transformation, and Loading (ETL) using **Sqoop** for seamless data migration between **RDBMS and HDFS**.
- Designed and implemented scalable and reliable data pipelines utilizing Azure services like **Azure Data Factory, Azure Databricks, Azure Synapse Analytics, and Azure SQL**.
- Utilized AWS technologies including **EC2, Lambda, EMR, Athena, Glue, S3, Redshift and IAM Policies**.
- Implemented ETL pipelines and data transformations using **Snowflake** and **DBT** for modern cloud data warehouse solutions.
- Repository usage – **Git hub, Bit bucket**
- Familiarity with agile methodologies and a proven track record of working in **agile** development environments.
- Strong communication and collaboration skills, adept at working in cross-functional teams to deliver data solutions within defined timelines and budgets.
- Excellent team player with in-depth knowledge of development tools and languages.

Technical Skills

Data Eco System

Hadoop, HDFS, MapReduce (MR), HBase, Sqoop, Hive, Apache Spark, Airflow, Snowflake, DBT, Databricks Notebook.

Databases

MySQL, Teradata, PostgreSQL, SAP HANA

AWS Cloud

AWS Kinesis, EC2, IAM, S3, Glue, Lambda, EMR, Athena, Redshift, Quick sight

Distribution

Cloudera

IDE

PyCharm, IntelliJ, Jupyter Notebook.

Scripting & Query Languages

SQL, Python, HQL, Pyspark

Azure Cloud

Azure Data factory, Azure Blob Storage, Azure Databricks, Azure Synapse Analytics and Azure SQL database.

Job Scheduler

Airflow

Software Tools

WinSCP, VMware work Station, putty, MySQLmanagement

Work Experience

- Working as **Lead Data Engineer** in **BrightCanyon Solutions India**

08/2018 – Present
Bangalore

Professional Experience

Lead Data Engineer, *Brightcanyon Solutions*

01/2024 – Present

Project: *Insurance Data Analysis*

Client: *Liberty Mutual*

Team Size: 6

Environment: Agile Methodology, AWS (IAM, EC2, S3, Athena, Glue, EMR, Redshift), PySpark, Hadoop, HDFS, Hive, Airflow, Sqoop, MySQL, Python, Teradata, SAP HANA, Salesforce, Git, Jira

Project Details: The objective of this project is to build a centralized insurance data platform where policy, claims, customer and agent related data from multiple source systems is collected, processed and prepared for analytics, reporting and fraud detection use cases. Data is ingested into AWS S3, transformed using AWS Glue and PySpark on EMR, and loaded into Amazon Redshift for business reporting and analytics.

Roles & Responsibilities:

- Design and implemented data pipelines using AWS services such as S3, Glue, and EMR.
- Loaded and Transformed large sets of Structured, Semi Structured and Unstructured data.
- Developing and maintaining technical documentation for Spark applications and data processing workflows, including data models, ETL processes, and system architecture.
- Experience in working with big data technologies such as Hadoop, Spark, and Kafka, and integrating them with AWS services.
- Proficient in programming languages such as Python for developing Spark applications and big data solutions.
- Developed PySpark ETL jobs using AWS Glue and EMR to ingest, transform and process data from multiple source systems and load curated datasets into Amazon Redshift.
- Designed and maintained Redshift tables, implemented data loading strategies and optimized analytical queries for reporting, insurance analytics and business consumption.
- Was responsible for Optimizing Spark SQL queries that helped in saving Cost to the project.
- Having hands-on experience with Spark Memory Tuning.
- Working with stakeholders to understand business requirements and translating them into technical requirements for big data solutions.

Associate Consultant-DATA ENGINEER, *Brightcanyon Solutions*

01/2021 – 12/2023

Project: *MARKETING ANALYTICS PLATFORM*

Client: *HSBC Bank*

Team Size: 4

Environment: Agile methodology, Azure(boards, ADF, ABS, ADB, ASD, Azure Synapse Analytics), Pyspark, HDFS, Hadoop, Hive, Airflow, Sqoop, Python, MySQL, PostgreSQL, GIT, Jira

Project Details: The goal of this project was to develop a robust Marketing Analytics Platform for a bank, enabling data-driven marketing strategies and insights to drive customer acquisition, retention, and campaign optimization. As a Data Engineer, I played a key role in designing and implementing the data engineering components of the platform.

Roles & Responsibilities:

- Designing and implementing data processing workflows using Azure Data Factory, including ETL processes and data movement between Azure services and on-premises data sources.
- Developing and optimizing Spark SQL queries to extract insights from data stored in Azure Blob Storage or Azure Data Lake Storage.
- Proficient in data modeling and database design using Azure services such as Azure SQL Database and Azure Cosmos DB.
- Involved in data clean-up by removing duplicated data.
- Involved in Collecting Business Requirements from Business Users, Translate into Technical Design (Data Pipelines and ETL workflows).
- Experience in working with big data technologies such as Hadoop, Spark, and Kafka, and integrating them with Azure services.
- Involved in import data from various RDBMS into Hive Tables which includes Queries using Sqoop.
- Generated and processed complex JSON data after all the transformations for easy storage and access as per client requirements.
- Development of Code & peer review of assigned task and Bug fixing.

JUNIOR DATA ENGINEER, *Brightcanyon Solutions*

08/2018 – 12/2020

Project: Data Warehouse Modernization

Client: *Wayfair*

Team Size: 6

Environment: Snowflake, DBT, SQL, Python, Airflow, AWS S3, MySQL, GitHub, Scrum

Project Details: The objective of the project was to modernize the existing data warehouse by migrating data from on-premises MySQL systems to Snowflake. Data was ingested from multiple source systems, transformed using DBT, and made available for reporting and analytics. The project focused on building scalable, maintainable, and optimized cloud-based data pipelines to support business reporting requirements.

Roles & Responsibilities:

- Developed DBT models for data transformation and business rule implementation.
- Created incremental and reusable transformation pipelines using DBT.
- Performed data validation, testing, and quality checks using DBT tests.
- Wrote and optimized Snowflake SQL queries for analytical workloads and reporting requirements.
- Built ETL pipelines to load data from source systems into Snowflake.
- Worked on dimensional data modeling including fact and dimension tables.
- Performed query optimization and warehouse performance tuning in Snowflake.

- Collaborated with business users to understand reporting requirements and data mappings.
- Participated in code reviews, deployment activities, and production support.
- Worked in Agile/Scrum methodology and used GitHub for version control and code management.

Education

Bachelor of arts (B.A), *Kumaun University*

2016
